## Providing a Higher Standard of Server Efficiency & Manager Awareness!

ServiceLight<sup>TM</sup>Pro is a tabletop communication device for restaurants that takes the guesswork out of customer service. With the touch of a finger, customers can let their servers know they are ready to order, need a refill or are ready for the check.

ServiceLight<sup>TM</sup>Pro alerts servers and managers that their customers have a specific need. When a light is touched, the server is called and the portable monitoring station registers the table's status. Servers can also be called from the kitchen or bar, ensuring that customers receive their orders as soon as they are ready.
